- Smart, low lag, data smoother
- Less noise + better timing = higher profits

Have you noticed how moving averages add some lag (delay) to your signals? ... especially when price gaps up or down in a big move, and you are waiting for your moving average to catch up? Wait no more! JMA eliminates this problem forever and gives you the best of both worlds: low lag and smooth lines.

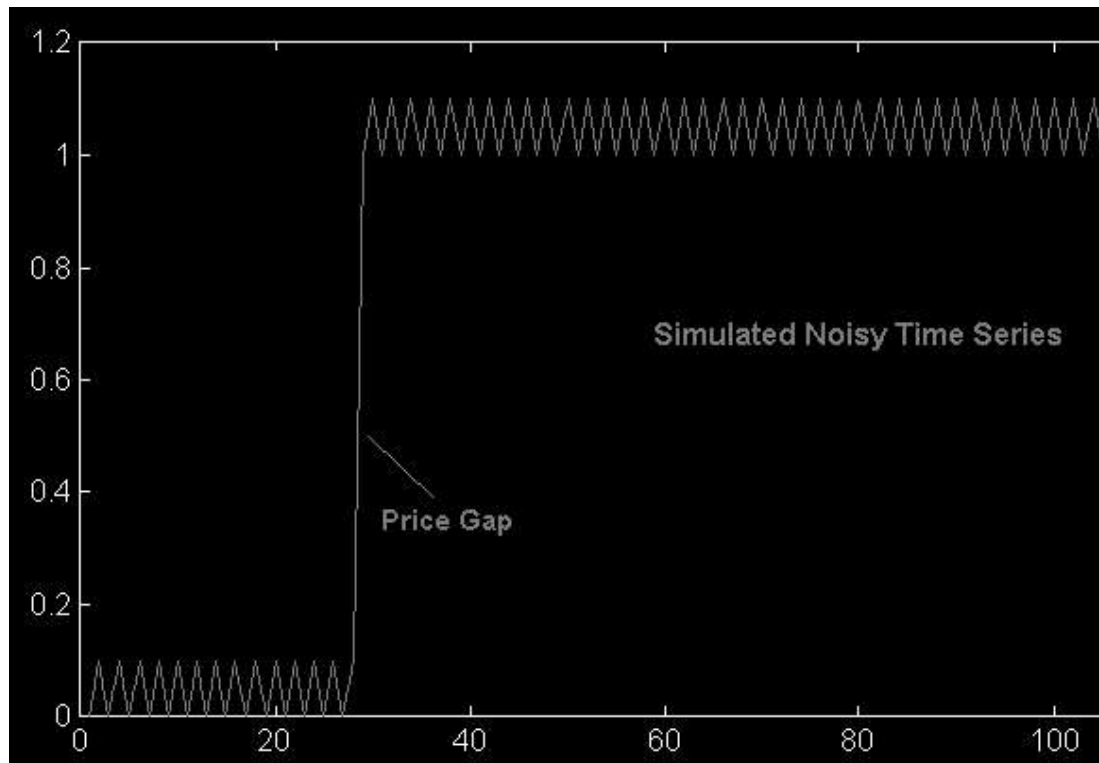

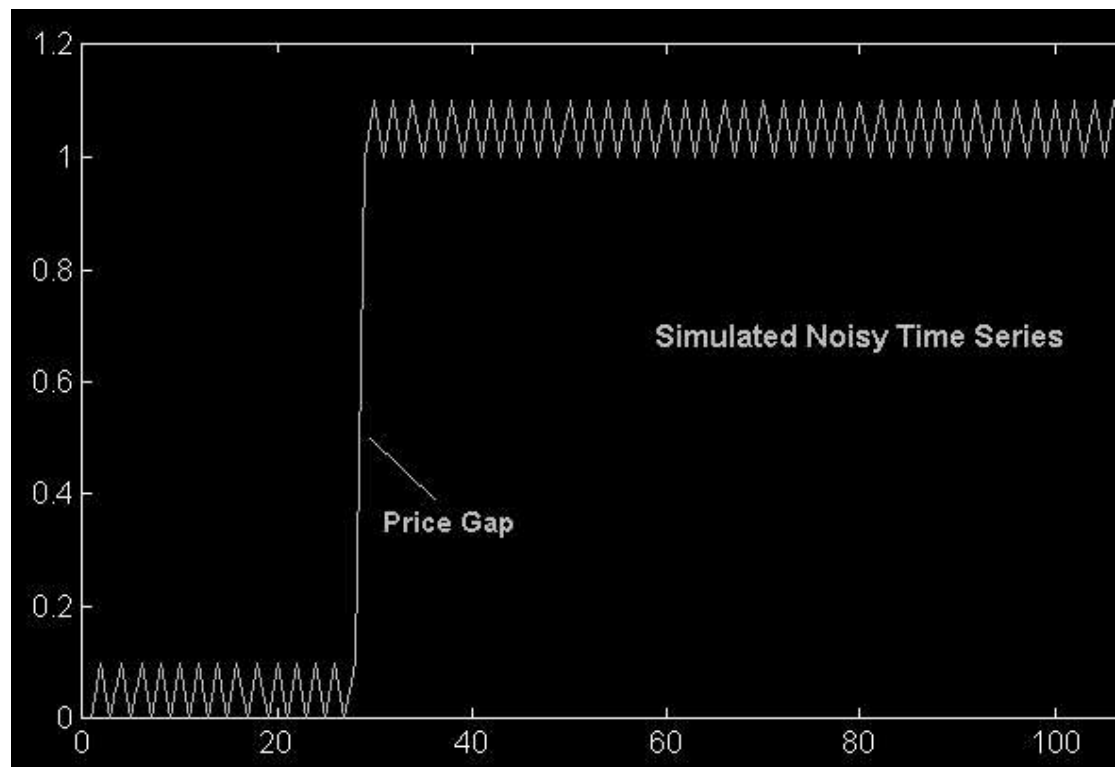

What Is JMA ?

Ideally, you would like a filtered signal to be both smooth and lag-free. Lag causes delays in your trades, and increasing lag in your indicators typically result in lower profits. In other words, late comers get what's left on the table after the feast has already begun.

That's why investors, banks and institutions worldwide ask for the Jurik Research Moving Average (JMA). You may apply it just as you would any

other popular moving average. However, JMA's improved timing and smoothness will astound you.

The jagged gray line in the chart simulates price action that begins in a low trading range, then gaps to a higher trading range. Since no one likes waiting on the sidelines, a perfect noise reducing filter (green line) will move smoothly along the center of the first trading range and then jump to the center of the new trading range almost immediately.

This chart shows how modern moving averages are getting ever closer to the performance of an ideal noise reduction filter. The best performer is still JMA.

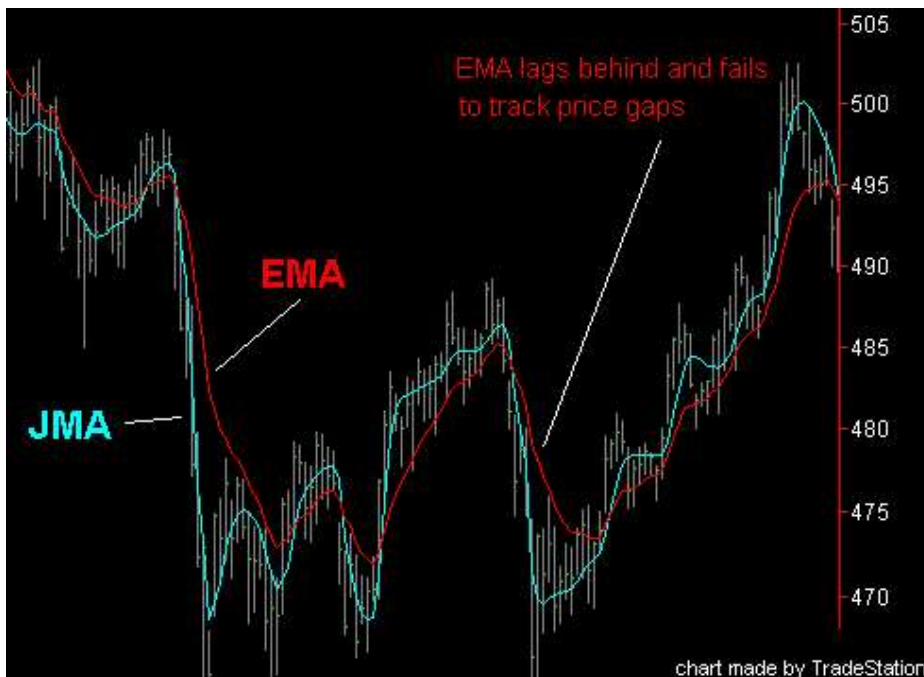

Demonstrations

This is just to tell you that after testing your product I've got outstanding results predicting the stocks' next day movement. I'm absolutely satisfied of this add-in.

-- Jean-Michel L., FRANCE

JMA AS A PROXY FOR PRICE

The first advantage to having a low-lag, low-noise moving average, is that you can use it as a "proxy" to replace the price time series. To see the value of using JMA's up/down trend to determine whether the market is rising or falling, [CLICK HERE](#).

JMA VS. EMA

This chart compares JMA to an exponential moving average (EMA) with similar smoothness. Note how poorly EMA tracks fast price movement. In contrast, JMA smoothes prices while tracking the chart's rapid up/down gapping action. With JMA, you can apply your trading strategies to a more accurate picture of price action.

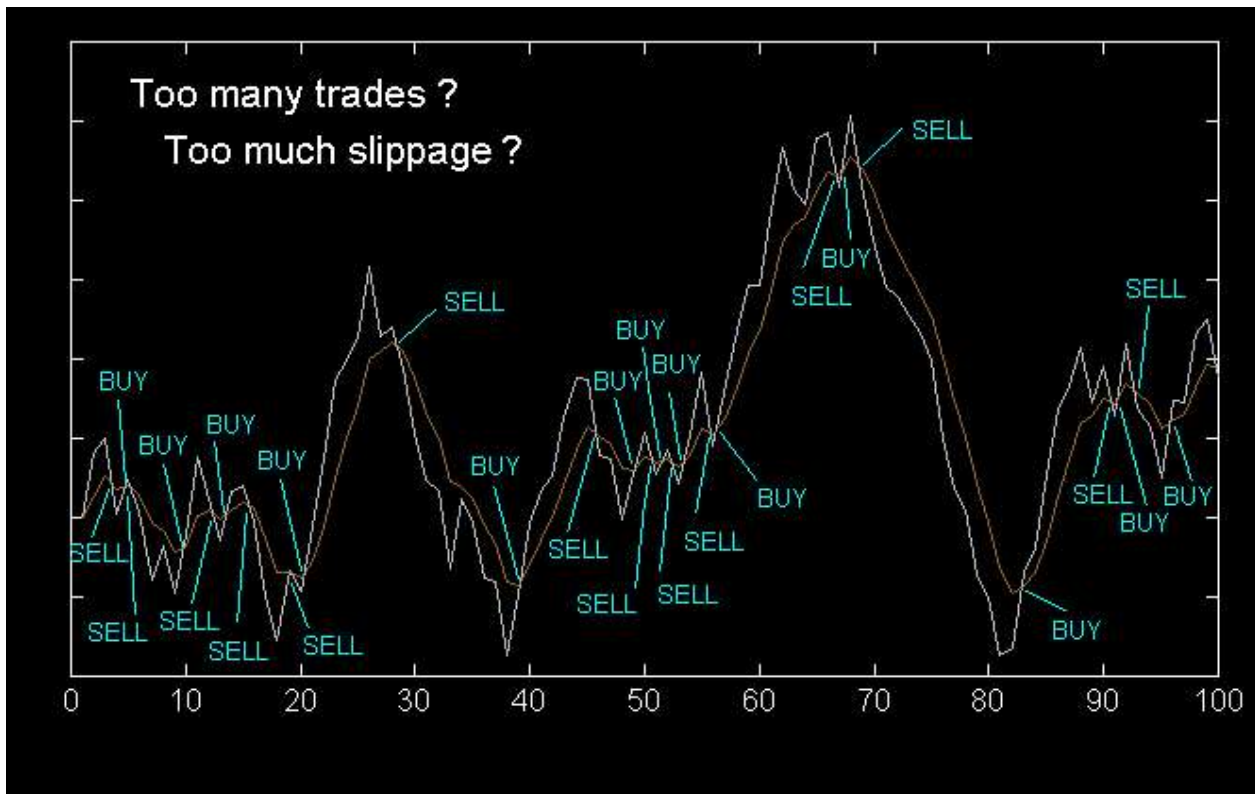

LONG TERM CROSSOVER ANALYSIS

In this chart, the top line represents one-half year of price. The second (green) pair of lines were produced by JMA. The bottom (orange) pair by the classical exponential moving average. If you were to trade on long term trends by placing a "buy" signal whenever the faster line crosses over the slower one, JMA would signal trades up to **TWO WEEKS EARLIER** than the classical method!

SHORT TERM CROSSOVER ANALYSIS

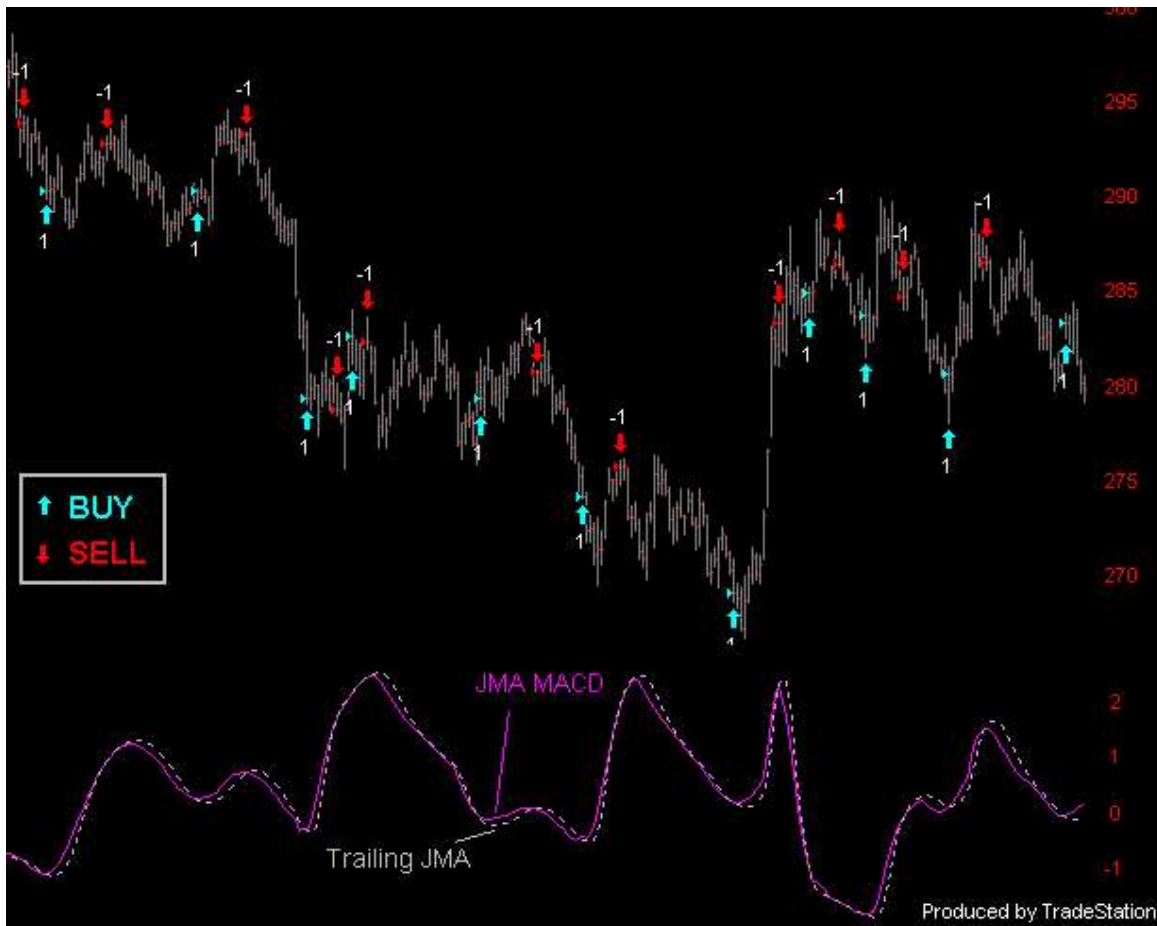

Trade strategy developers are all too familiar with the dilemma of using moving averages in short term trading. Smooth lines are too slow (producing late trades) and fast lines are too jagged (producing excessive trades). Both late and excessive trading will devour profits.

This chart shows how using JMA can eliminate excessive trades while maintaining timely signals.

JMA not only allows you to select "smoothness", but you can also fine tune with its PHASE setting. PHASE lets you customize a trade-off between lag and overshoot, giving you greater control over JMA's behavior. We illustrate this in the following example.

We created two oscillators: a MACD (solid purple line) made by taking the difference between two JMA values, and a trailing JMA of the MACD (dashed white line). Trades were triggered when these two lines crossed. With optimized parameter settings for JMA lengths and phase, we attained buy and sell signals as shown.

To see TradeStation code that produced these crossover lines, [CLICK HERE](#).

"JMA now has a phase adjustment that you can use to produce lag or shift forward an adaptive moving average. You can make a very good MACD out of this."

-- Marek Jankowski, California

 See JMA on [S&P 500 data](#).

 See how Jurik's AMA (an earlier version of JMA) was used in a system that forecasts a MACD oscillator on D-Mark futures. For details, see Futures Magazine, May 1996, p44-48.

 See how using JMA to replace the standard moving averages inside classic indicators can improve performance. We noticed outrageous improvement by modifying the classic DMI in this way. Performance is so good, we named the modified version "DMX" and gave it a separate [web page](#).

Comparisons + Lab Results

There are plenty of people on these internet forums who use Jurik's software and have done so for years. JMA is the only purchased indicator I use. Jurik's stuff does exactly what it's supposed to. The support is excellent. The results for JMA are unmatched by any other moving average. -- Allan Kaminsky, member IEEE (Institute of Electrical and Electronics Engineers)

Based on years of military research that used computers to track moving targets, JMA is a powerful adaptive tracker that can smooth time series data with very small lag, no overshoots and no oscillations. The algorithm is stable and avoids the complexities of neural networks. JMA delivers the best all around performance for smoothness, accuracy and timeliness.

JMA performs BETTER THAN OTHER SOPHISTICATED METHODS, including ...

- Kalman's g, g-h, g-h-k filters, with or without fading memory
- Savitzky-Golay filters, with or without fading memory
- Kaufman's adaptive moving average (KAMA)
- Chande's Variable Index Dynamic Average (VIDYA)
- Double Exponential Moving Average (DEMA)
- Triple Exponential Moving Average (T3)
- Brown's Modified Moving Average (MMA)
- Ehler's Modified Optical Elliptical Filter (MEF)
- Ehler's Symmetrically weighted FIR filter
- Hull Moving Average (HMA)

 Download comprehensive [LAB TEST RESULTS](#), in a Microsoft Excel spreadsheet.

JMA is FAST. With a 1.7 GHz processor, JMA can rip through 1,000,000 points in only 3.3 seconds!!

 Download your own [JMA SPEED TEST](#) on one million data points. Check Test Requirements listed below!

Test Requirements:

- JMA ("DL" version) already installed on your computer.
- Microsoft Excel (version 97 ... 2003) already installed on your computer.

Available Platforms

[TradeStation](#) -- [MultiCharts](#)

- Order JMA from our "TS" (TradeStation) Toolset or "MC" (MultiCharts) Toolset.
- JMA will process any time series you give it, including the results of custom made functions.
- Package includes both indicators and functions, so you can use JMA in your own trading strategies and indicators.
- BONUS! Includes our legacy moving average, AMA. Demand for AMA continues because it is ultra smooth and great for high frequency noise reduction.

[eSignal](#) -- [Investor/RT](#) -- [NeoTicker](#) -- [Trade Navigator](#) -- [NinjaTrader](#) -- [Extreme Charts](#) -- [Sierra Chart](#)

- Order our "UT" Toolset, which is a package of JMA, DMX, RSX and VEL. Various time limited licenses.
- NeoTicker accepts both "UT" and "DL" Toolsets. Go [here](#) to see the benefits of each Toolset.

[AmiBroker](#) - [Neoticker](#) - [NeuroShell](#) - [Wavewi\\$e](#) - [Tradecision](#) - [Matlab](#)

- Order JMA from our "DL" Toolset.
- NeoTicker accepts both "UT" and "DL" Toolsets. Go [here](#) to see the benefits of each Toolset.

[DLL \(for software programmers\)](#)

- Order JMA from either our "UT" or "DL" Toolset. Go [HERE](#) for details.

Additional Information

The JMA software package includes

- The latest JMA module with instructions.
- [DMX](#) comes free with your purchase of JMA.
- Sample code showing how to use JMA.

Read our [CUSTOMER's LETTERS](#). — See what others have to say.

Read our [FREQUENTLY ASKED QUESTIONS](#). — For answers to technical issues.

HOW TO ORDER

— Prices, order form, specific questions to ask.

JMA is an indicator, not a trading system.
JMA is designed to be applied in trading systems of your own design.

- Different time frames on a chart may produce different results.
- Past performance of any trading system is never a guarantee of future performance.
- All trading strategies have risk and commodities/futures trading leverages that risk.
